

**YILFERT ROSIER ROSASOL 05.05.40+TE**

1. It is rich in macro and micro nutritional elements and produced using special raw materials. It is recommended to use it in the fruit period after the plants have completed their development.
2. It contains a very high amount of potassium, contributing to the size and ripening of fruits.
3. It can be used until the end of harvest of plants or fruit trees.
4. It is rich in macro and micro nutrients and can be applied in every period, starting from the early development stages of plants.
5. It can be used in all kinds of soil conditions and is completely absorbed by the plant.
6. It can be used safely with drip irrigation, sprinkler or foliar irrigation. It is completely soluble in water.
7. Thanks to the special raw materials used in production, it is in a form that can be completely absorbed by plants even in cold soil conditions with its low pH and low EC value.
8. It has homogeneous particle size.
9. All microelements inside are chelated and produced according to European Union norms..
